#### 1. Introduction

The Dallas Area Municipal Authority (DAMA) consists of Dallas Borough, Dallas Township, and Kingston Township in Luzerne County which were classified as small Municipal Separate Storm Sewer Systems (MS4s) based upon the 2010 U.S. Census urbanized area data. The Pennsylvania Department of Environmental Protection (PA DEP) has notified Dallas Borough, Dallas Township, and Kingston Township that they are required to apply for coverage under a National Pollutant Discharge Elimination System (NPDES) MS4 permit. The requirements for Dallas Borough, Dallas Township and Kingston Township are defined by the PA DEP Municipal MS4 Requirements Table as:

MS4 Name	NPDES ID	Individual Permit Required?	Reason	Impaired Downstream Waters or Applicable TMDL Name	Requirement(s)	Other Cause(s) of Impairment
Luzerne Cour	nty					
Dallas Borough	PAG132234	No		Chesapeake Bay Nutrients/Sediment	Appendix D-Nutrients, Siltation (4a)	
Dallas Township	PAI132232	No		Chesapeake Bay Nutrients/Sediment	Appendix D-Nutrients, Siltation (4a)	
Kingston	DAC122219			Susquehanna River	Appendix A-Metals (4a), Appendix C-PCB (4a)	Mercury (5)
Township	FAG132210	INO		Chesapeake Bay Nutrients/Sediment	Appendix D-Nutrients, Siltation (4a)	

PA DEP has published the Pollutant Aggregation Suggestions for MS4 Requirements Table; per the aggregation instructions, the aggregate total required reduction may be analyzed and Best Management Practices (BMPs) may be implemented in the identified watersheds, tributary to the same Hydrologic Unit Code (HUC) 12 watershed. The aggregated requirements for the DAMA municipalities are as follows:

MS4 Name	Permit Number	HUC 12 Name	Impaired Downstream Waters or Applicable TMDL Name	Requirement(s)
Luzerne Coun	nty			
Dallas Borough	PAG132234	City of Wilkes-Barre-Susquehanna River, Toby Creek	Chesapeake Bay Nutrients/Sediment	Appendix D- Siltation/Nutrients
Dallas Township	PAI132232	City of Wilkes-Barre-Susquehanna River, Toby Creek	Chesapeake Bay Nutrients/Sediment	Appendix D- Siltation/Nutrients
Kingston Township	gston vnship PAG132218	City of Wilkes-Barre-Susquehanna River, Warrior Creek-Susquehanna River	Susquehanna River	Appendix A-Metals, Appendix C-PCB
		City of Wilkes-Barre-Susquehanna River, Toby Creek, Warrior Creek-Susquehanna River	Chesapeake Bay Nutrients/Sediment	Appendix D- Siltation/Nutrients

This joint municipal Pollutant Reduction Plan (PRP) has been developed to satisfy the aggregated requirements, as put forward by the PA DEP, of Chesapeake Bay Pollutant Reduction Plan.

#### 2. Public Participation

DAMA's original PRP was approved by DEP in 2018 and was revised in March 2024 to include additional projects. Information regarding the previously proposed PRP projects and why they were determined to be infeasible can be found in Attachment F. DAMA encouraged a plan that included public participation and buy in. The PRP was

advertised for public review and comment for a period of 45 days in the local paper on April 29, 2024; a copy of the advertisement can be found in Attachment A.I.

A copy of the complete draft PRP was posted on the DAMA website as well as each individual municipal website prior to the public notice. A hard copy was also made available at the DAMA and municipal offices, as well as the library during normal business hours. Written comments regarding the plan were received by DAMA from April 29, 2024 through June 13, 2024; a copy of all written comments are provided in Attachment A.II. The revised PRP was announced as available for review during the May 9, 2024 public meeting. DAMA accepted public comments on the PRP during the June 13, 2024 public meeting; a summary of comments received is provided in Attachment A.III.

A record of consideration for all timely comments received is provided in Attachment A.IV. This PRP reflects careful planning of DAMA with respect to the impaired waters of the Commonwealth, local flooding, erosion problems, and the financial impact to the residents.

#### 3. Mapping

In accordance with PA DEP guidelines for development of the PRP, DAMA has completed mapping of the regulated MS4 Storm Sewersheds; the required mapping is provided in Attachment B. Mapping includes the collection and conveyance to regulated outfalls, identified outlets and outfalls, potential BMPs, and waters of the Commonwealth within the DAMA PRP planning area. The 2018 PRP included the parsing of state roadways. The 2024 PRP has been revised to parse state roadways, NPDES permitted facilities, and portions of the planning area that do not interact with the DAMA MS4. A map outlining parsed areas has been provided in Attachment B.

#### 4. Pollutants of Concern

DAMA, in accordance with the PA DEP Municipal requirements table and the impaired waters mapping provided herein, is subject to an aggregation of Appendix D of the MS4 permit.

#### Appendix D – Chesapeake Bay

Appendix D is the requirement for development of a Chesapeake Bay Pollutant Reduction Plan (CBPRP). In accordance with the PRP guidelines, the goal of the CBPRP is for the following reductions:

- 3% reduction of Total Nitrogen (TN)
- 5% reduction of Total Phosphorous (TP)
- 10% reduction of Sediment (TSS)

Furthermore, the PA DEP PRP instructions state: "Permittees are encouraged to select appropriate BMPs to achieve the 10% sediment loading reduction objective, as it is expected that, overall, within the Bay watershed, the TP (5%) and TN (3%) goals will be achieved when a 10% reduction in sediment is achieved." The PRP has been prepared to meet the required 10% reduction of sediment.

#### 5. Existing Loading for Pollutants of Concern

Pollutant loadings were calculated based upon PA DEP's Developed Land Loading Rate for PA Counties (Attachment B of the PRP Instructions) for Luzerne County; the calculated pollutant loadings for each watershed are provided in Attachment C. The calculations are summarized below:

Appendix D – Chesapeare Day						
Metershed	Drainage Area (ac)			PA DEP Land Loading		
watersned	Impervious	Pervious	Total	TN (lbs/yr)	TP (lbs/yr)	TSS (lbs/yr)
Chesapeake Bay	993.76	4,409.37	5,403.13	106,108.90	3,602.20	2,613,241.84
Required Reduction Percent 3% 5% 10%		10%				
Required Reduction (lbs/yr) 3,183.27 180.11 261,324			261,324.18			

#### Appendix D – Chesapeake Bay

#### A. Existing BMP Load Reductions

Based upon the mapping provided in Attachment B, DAMA has identified existing BMPs that would reduce the existing pollutant loading. DAMA parsed state and NPDES permitted facilities from calculations; additional information on parsed areas can be found in Attachment B. Attachment D provides a summary of the existing BMPs within each municipality, along with the PA DEP permit number, if available, and approximate date of installation. Operation and maintenance agreements are available for existing BMPs providing pollutant reduction. The percentage of pollutant reduction for each BMP was determined based upon the recommendation reports of the Chesapeake Bay Expert Panel. The updated existing BMP loading for each watershed with BMP calculations are provided in Attachment E. The existing loading for TSS, TP, and TN was re-calculated for each storm sewer shed accounting for the pollutant load reduction from the existing BMPs. BMP reductions and an updated pollutant reduction goal is summarized below:

	Drai	nage Area (a	c)	PA	DEP Land Loa	nding
Watershed	Impervious	Pervious	Total	TN (lbs/yr)	TP (lbs/yr)	TSS (lbs/yr)
Chesapeake Bay	993.76	4,409.37	5,403.13	106,108.90	3,602.20	2,613,241.84
BMP Reductions	231.21	602.18	833.39	2,531.91	161.38	181,935.42
Base Pollutant Loading with Existing BMPs				103,576.99	3,440.82	2,431,306.42
Required Reduction Percent				3%	5%	10%
Required Reduction (lbs/yr)				3,107.31	172.04	243,130.64

#### Dalla Area Municipal Authority Base Pollutant Loading with Existing BMPs Summary:

#### 6. Selected BMPs

DAMA developed a Selected BMP concept plan to identify potential BMPs to be implemented. The associated pollutant loading reductions for each BMP were calculated and are provided in Attachment G along with a summary description of the Selected BMPs evaluated. The percentage of pollutant reduction provided by each BMP was determined based on the PADEP BMP Effectiveness Value table. BMP efficiency percentages are based upon information available at the time of PRP development and will be confirmed in the PRP Final Report due to DEP at the end of the MS4 permit cycle. DAMA evaluated the following factors in selection of the BMPs to be implemented to achieve the required pollutant load reduction. These factors included:

- Overall BMP cost
- Availability of grant funding
- Feasibility of project
- Local flooding and erosion problems
- Drainage areas associated with identified waterways
- Consistency with Economic Development initiatives

Based upon the above factors, DAMA chose the Selected BMPs to be implemented under the MS4 permit from 2018 – 2023. The Selected BMP locations are identified in Attachment B. The Selected BMP pollutant reductions are summarized below. More information regarding the Selected BMPs can be found in Attachment G.

Watershed	Pollutant Reduction				
watersneu	TN (lbs./yr.)	TP (lbs./yr.)	TSS (lbs./yr.)		
Chesapeake Bay	2,030.70	253.56	244,774.98		
Required Reduction	3,107.31	172.04	243,130.64		
Surplus Reduction	+1,076.61	+81.51	+1,644.34		

#### 7. Alternative BMPs

DAMA developed an Alternative BMP concept plan to identify potential BMPs to be implemented, see Attachment H. The associated pollutant loading reductions for each BMP were calculated and are provided in Attachment H along with a summary description of the Alternative BMPs evaluated. The percentage of pollutant reductions for each BMP were determined based on the PADEP BMP Effectiveness Value table. DAMA evaluated the following factors in selection of the BMPs to be implemented to achieve the required pollutant load reduction. These factors included:

- Overall BMP cost
- Availability of grant funding
- Feasibility of project
- Local flooding and erosion problems
- Drainage areas associated with identified waterways
- Consistency with Economic Development initiatives

Based upon the above factors, DAMA developed a list of BMPs to be considered as alternative projects in the event a Selected BMP is not feasible. The Alternative BMP locations are identified in Attachment B. The Alternative BMP pollutant reductions are summarized below. More information regarding the Alternative BMPs can be found in Attachment H:

Watershed	Pollutant Reduction			
Watersneu	TN (lbs./yr.)	TP (lbs./yr.)	TSS (lbs./yr.)	
Chesapeake Bay	1,439.14	307.51	252,616.12	
Required Reduction	3,107.31	172.04	243,130.64	
Surplus Reduction	-1,668.17	+135.47	+9,485.48	

#### 8. Funding Mechanism

DAMA, through the planning phase, evaluated the cost associated with the selected plan; the Selected BMP implementation cost is summarized below:

BMP ID	BMP Description	Estimated Project Total
P1	Dry Extended Detention Basin	\$125,000
P2	Dry Extended Detention Basin	\$125,000
P4	Dry Extended Detention Basin	\$150,000
P21	Dry Extended Detention Basin	\$100,000
P26	Dry Extended Detention Basin	\$150,000
P28	Filtering Practice	\$150,000
P29	Filtering Practice	\$100,000
P32	Filtering Practice	\$100,000
P35	Filtering Practice	\$75,000
P37	Filtering Practice	\$100,000
B1	Dry Extended Detention Basin	\$80,000
B7	Dry Extended Detention Basin	\$100,000
B13	Dry Extended Detention Basin	\$100,000
B16	Dry Extended Detention Basin	\$75,000
B29	Dry Extended Detention Basin	\$125,000
B30	Dry Extended Detention Basin	\$125,000
B33	Dry Extended Detention Basin	\$100,000
B34	Dry Extended Detention Basin	\$60,000
B35	Dry Extended Detention Basin	\$75,000
B41	Dry Extended Detention Basin	\$20,000
B45	Dry Extended Detention Basin	\$50,000
B51	Dry Extended Detention Basin	\$100,000
B61	Dry Extended Detention Basin	\$100,000
B71	Dry Extended Detention Basin	\$95,000
B72	Dry Extended Detention Basin	\$80,000
B74	Dry Extended Detention Basin	\$95,000
B79	Dry Extended Detention Basin	\$95,000
B80	Dry Extended Detention Basin	\$95,000
SR10	Stream Restoration	\$120,000
SR12	Stream Restoration	\$120,000
SR19	Stream Restoration	\$230,000
SR20	Stream Restoration	\$150,000
	Total	\$3,365,000.00

The required funding identified above will be funded through the municipal stormwater fees. The stormwater fee is based upon the amount of impervious surface on a property. DAMA will also pursue relevant grant opportunities as they arise.

#### 9. Responsible Parties for Operation and Maintenance (O&M) of BMPs

The member municipalities and DAMA are the responsible parties for Ó&M of proposed BMPs. Specific requirements for the BMP are identified below:

BMP-P1 Wet Ponds and Wetlands:

Location:	Dallas Borough Park (Luzerne Ave.)
Responsible Party:	DAMA
O&M Activities:	-During the first growing season or until established, vegetation should be inspected every 2 to 3 weeks.

-Inspections should occur at least 4 times per year and after major storms (greater than 2 inches in 24 hours) or rapid ice breakup.

-Inspections should access the vegetation, erosion, flow channelization, bank stability, inlet/outlet conditions, embankment, and sediment/debris accumulation.

-The pond drain should also be inspected and tested 4 times per year. Problems should be corrected as soon as possible.

-Wet Pond and buffer vegetation may need support (watering, weeding, mulching, replanting, etc.) during the first 3 years.

-Undesirable species should be carefully removed and desirable replacements planted if necessary. Vegetation should maintain at least an 85 percent cover of the emergent vegetation zone and buffer area. -Sediment should be removed from the forebay before it occupies 50 percent of the forebay, typically every 5 to 10 years.

#### BMP-P2 Wet Ponds and Wetlands:

Location:	Lackawanna Ave.
Responsible Party:	DAMA
O&M Activities:	<ul> <li>-During the first growing season or until established, vegetation should be inspected every 2 to 3 weeks.</li> <li>-Inspections should occur at least 4 times per year and after major storms (greater than 2 inches in 24 hours) or rapid ice breakup.</li> <li>-Inspections should access the vegetation, erosion, flow channelization, bank stability, inlet/outlet conditions, embankment, and sediment/debris accumulation.</li> <li>-The pond drain should also be inspected and tested 4 times per year. Problems should be corrected as soon as possible.</li> <li>-Wet Pond and buffer vegetation may need support (watering, weeding, mulching, replanting, etc.) during the first 3 years.</li> <li>-Undesirable species should be carefully removed and desirable replacements planted if necessary. Vegetation should maintain at least an 85 percent cover of the emergent vegetation zone and buffer area.</li> <li>-Sediment should be removed from the forebay before it occupies 50 percent of the forebay, typically every 5 to 10 years.</li> </ul>

#### BMP-P4 Dry Extended Detention Basin:

Location:	Dallas Township Park
Responsible Party:	DAMA
O&M Activities:	<ul> <li>-Inspect and correct erosion problems, damage to vegetation, and sediment and debris accumulation (address when &gt;3 inches at any spot or covering vegetation).</li> <li>-Inspect vegetation on side slopes for erosion and formation of rills and gullies, correct as needed.</li> <li>-Inspect for pools of standing water; dewater and discharge to an approved location and restore to design grade.</li> <li>-Inspect for litter; remove prior to mowing.</li> <li>-Remove invasive plants as needed or carefully apply selected herbicide to invasive plants as needed.</li> <li>-Inspect for uniformity in cross-section and longitudinal slope, correct as needed.</li> <li>-Inspect basin inlet (curb cuts, pipes, etc.) and outlet for signs of erosion or blockage, correct as needed.</li> <li>-Plant alternative grass species in the event of unsuccessful establishment.</li> <li>-Reseed bare areas; install appropriate erosion control measures when native soil is exposed, or erosion channels are forming.</li> <li>-Mow and trim vegetation 1-2 times per year outside of the growing season (i.e., only mow in early spring or late fall). Mower height should be set between 8-12 inches. Mow only when basin is dry to avoid rutting.</li> </ul>

#### BMP-P21 Dry Extended Detention Basin:

Location:	Dallas School District/Back Mountain Little League Property
Responsible Party:	DAMA
O&M Activities:	<ul> <li>-Inspect and correct erosion problems, damage to vegetation, and sediment and debris accumulation (address when &gt;3 inches at any spot or covering vegetation).</li> <li>-Inspect vegetation on side slopes for erosion and formation of rills and gullies, correct as needed.</li> <li>-Inspect for pools of standing water; dewater and discharge to an approved location and restore to design grade.</li> <li>-Inspect for litter; remove prior to mowing.</li> <li>-Remove invasive plants as needed or carefully apply selected herbicide to invasive plants as needed.</li> </ul>

-Inspect for uniformity in cross-section and longitudinal slope, correct as needed.

-Inspect basin inlet (curb cuts, pipes, etc.) and outlet for signs of erosion or blockage, correct as needed.

-Plant alternative grass species in the event of unsuccessful establishment.

-Reseed bare areas; install appropriate erosion control measures when native soil is exposed, or erosion channels are forming.

-Mow and trim vegetation 1-2 times per year outside of the growing season (i.e., only mow in early spring or late fall). Mower height should be set between 8-12 inches. Mow only when basin is dry to avoid rutting.

#### BMP-P26 Dry Extended Detention Basin:

Location:	Hemlock St.
Responsible Party:	DAMA
O&M Activities:	<ul> <li>-Inspect and correct erosion problems, damage to vegetation, and sediment and debris accumulation (address when &gt;3 inches at any spot or covering vegetation).</li> <li>-Inspect vegetation on side slopes for erosion and formation of rills and gullies, correct as needed.</li> <li>-Inspect for pools of standing water; dewater and discharge to an approved location and restore to design grade.</li> <li>-Inspect for litter; remove prior to mowing.</li> <li>-Remove invasive plants as needed or carefully apply selected herbicide to invasive plants as needed.</li> <li>-Inspect for uniformity in cross-section and longitudinal slope, correct as needed.</li> <li>-Inspect basin inlet (curb cuts, pipes, etc.) and outlet for signs of erosion or blockage, correct as needed.</li> <li>-Plant alternative grass species in the event of unsuccessful establishment.</li> <li>-Reseed bare areas; install appropriate erosion control measures when native soil is exposed, or erosion channels are forming.</li> <li>-Mow and trim vegetation 1-2 times per year outside of the growing season (i.e., only mow in early spring or late fall).</li> <li>Mower height should be set between 8-12 inches. Mow only when basin is dry to avoid rutting.</li> </ul>

#### **BMP-P28 Filtering Practice:**

Location:	Glenview Ave.
Responsible Party:	DAMA
O&M Activities:	<ul> <li>Inspection of the filter is recommended at least four times per year. During inspection the following conditions should be considered: <ul> <li>Any water left in a surface media after the design drain down time indicates the filter is not optimally functioning.</li> <li>Any small erosion feature should be filled with existing or new filtering media. Excessive erosion indicates the filter is not functioning properly.</li> <li>Consult the design engineer to determine a viable solution if it appears the filter is not functioning.</li> </ul> </li> <li>Remove trash and debris as necessary.</li> <li>Scrape silt with rakes to prevent compaction</li> <li>Remove and disposed of all accumulated fine sediments (mud and silts)</li> <li>Replace filtering media</li> </ul>
BMP-P29 Filtering Practice:	
Location:	Poplar Ave.
Responsible Party:	DAMA
O&M Activities:	-Inspection of the filter is recommended at least four times

per year. During inspection the following conditions should be considered: •Any water left in a surface media after the design drain

Any water left in a surface media after the design drain down time indicates the filter is not optimally functioning.
Any small erosion feature should be filled with existing or new filtering media. Excessive erosion indicates the filter is not functioning properly.

•Consult the design engineer to determine a viable solution if it appears the filter is not functioning.

-Remove trash and debris as necessary.

-Scrape silt with rakes to prevent compaction

-Remove and disposed of all accumulated fine sediments (mud and silts)

-Replace filtering medium if scraping/removal has reduced depth of filtering media

#### **BMP-P32 Filtering Practice:**

Location:	Midland Dr.
Responsible Party:	DAMA
O&M Activities:	<ul> <li>-Inspection of the filter is recommended at least four times per year. During inspection the following conditions should be considered:</li> <li>Any water left in a surface media after the design drain down time indicates the filter is not optimally functioning.</li> <li>Any small erosion feature should be filled with existing or new filtering media. Excessive erosion indicates the filter is not functioning properly.</li> <li>Consult the design engineer to determine a viable solution if it appears the filter is not functioning.</li> <li>Remove trash and debris as necessary.</li> <li>Scrape silt with rakes to prevent compaction</li> <li>Remove and disposed of all accumulated fine sediments (mud and silts)</li> <li>Replace filtering mediam if scraping/removal has reduced depth of filtering media</li> </ul>
Location:	2211 Memorial Hwy
Posnonsible Party:	
O&M Activities:	<ul> <li>Inspection of the filter is recommended at least four times per year. During inspection the following conditions should be considered:</li> <li>Any water left in a surface media after the design drain down time indicates the filter is not optimally functioning.</li> <li>Any small erosion feature should be filled with existing or new filtering media. Excessive erosion indicates the filter is not functioning properly.</li> <li>Consult the design engineer to determine a viable solution if it appears the filter is not functioning.</li> </ul>

-Remove trash and debris as necessary.

-Scrape silt with rakes to prevent compaction

-Remove and disposed of all accumulated fine sediments (mud and silts)

-Replace filtering medium if scraping/removal has reduced depth of filtering media

#### **BMP-P37 Filtering Practice:**

Location:	Overbrook Ave.
<b>Responsible Party:</b>	DAMA
O&M Activities:	<ul> <li>-Inspection of the filter is recommended at least four times per year. During inspection the following conditions should be considered:</li> <li>Any water left in a surface media after the design drain down time indicates the filter is not optimally functioning.</li> <li>Any small erosion feature should be filled with existing or new filtering media. Excessive erosion indicates the filter is not functioning properly.</li> <li>Consult the design engineer to determine a viable solution if it appears the filter is not functioning.</li> <li>Remove trash and debris as necessary.</li> <li>Scrape silt with rakes to prevent compaction</li> <li>Remove and disposed of all accumulated fine sediments (mud and silts)</li> <li>Replace filtering media.</li> </ul>
BMP-B1 Dry Extended D	etention Basin:
Location:	Irem Golf Course Ridgeway Dr.
Responsible Party:	DAMA
O&M Activities:	<ul> <li>-Inspect and correct erosion problems, damage to vegetation, and sediment and debris accumulation (address when &gt;3 inches at any spot or covering vegetation).</li> <li>-Inspect vegetation on side slopes for erosion and formation of rills and gullies, correct as needed.</li> <li>-Inspect for pools of standing water; dewater and discharge to an approved location and restore to design grade.</li> <li>-Inspect for litter; remove prior to mowing.</li> <li>-Remove invasive plants as needed or carefully apply selected herbicide to invasive plants as needed.</li> <li>-Inspect for uniformity in cross-section and longitudinal slope, correct as needed.</li> <li>-Inspect basin inlet (curb cuts, pipes, etc.) and outlet for signs of erosion or blockage, correct as needed.</li> <li>-Plant alternative grass species in the event of unsuccessful establishment.</li> <li>-Reseed bare areas; install appropriate erosion control measures when native soil is exposed, or erosion channels are forming.</li> </ul>

-Mow and trim vegetation 1-2 times per year outside of the growing season (i.e., only mow in early spring or late fall). Mower height should be set between 8-12 inches. Mow only when basin is dry to avoid rutting.

#### BMP-B7 Dry Extended Detention Basin:

Location:	Misericordia University Tennis Courts
Responsible Party:	DAMA
O&M Activities:	<ul> <li>-Inspect and correct erosion problems, damage to vegetation, and sediment and debris accumulation (address when &gt;3 inches at any spot or covering vegetation).</li> <li>-Inspect vegetation on side slopes for erosion and formation of rills and gullies, correct as needed.</li> <li>-Inspect for pools of standing water; dewater and discharge to an approved location and restore to design grade.</li> <li>-Inspect for litter; remove prior to mowing.</li> <li>-Remove invasive plants as needed or carefully apply selected herbicide to invasive plants as needed.</li> <li>-Inspect for uniformity in cross-section and longitudinal slope, correct as needed.</li> <li>-Inspect basin inlet (curb cuts, pipes, etc.) and outlet for signs of erosion or blockage, correct as needed.</li> <li>-Plant alternative grass species in the event of unsuccessful establishment.</li> <li>-Reseed bare areas; install appropriate erosion control measures when native soil is exposed, or erosion channels are forming.</li> <li>-Mow and trim vegetation 1-2 times per year outside of the growing season (i.e., only mow in early spring or late fall). Mower height should be set between 8-12 inches. Mow only when basin is dry to avoid rutting.</li> </ul>

#### BMP-B13 Dry Extended Detention Basin:

Location:	2525 Memorial Hwy.
Responsible Party:	DAMA
O&M Activities:	<ul> <li>-Inspect and correct erosion problems, damage to vegetation, and sediment and debris accumulation (address when &gt;3 inches at any spot or covering vegetation).</li> <li>-Inspect vegetation on side slopes for erosion and formation of rills and gullies, correct as needed.</li> <li>-Inspect for pools of standing water; dewater and discharge to an approved location and restore to design grade.</li> </ul>

-Inspect for litter; remove prior to mowing.

-Remove invasive plants as needed or carefully apply selected herbicide to invasive plants as needed.

-Inspect for uniformity in cross-section and longitudinal slope, correct as needed.

-Inspect basin inlet (curb cuts, pipes, etc.) and outlet for signs of erosion or blockage, correct as needed.

-Plant alternative grass species in the event of unsuccessful establishment.

-Reseed bare areas; install appropriate erosion control measures when native soil is exposed, or erosion channels are forming.

-Mow and trim vegetation 1-2 times per year outside of the growing season (i.e., only mow in early spring or late fall). Mower height should be set between 8-12 inches. Mow only when basin is dry to avoid rutting.

#### BMP-B16 Dry Extended Detention Basin:

#### **Responsible Party:** DAMA

O&M Activities: -Inspect and correct erosion problems, damage to vegetation, and sediment and debris accumulation (address when >3 inches at any spot or covering vegetation).
 -Inspect vegetation on side slopes for erosion and formation of rills and gullies, correct as needed.

-Inspect for pools of standing water; dewater and discharge to an approved location and restore to design grade.

-Inspect for litter; remove prior to mowing.

-Remove invasive plants as needed or carefully apply selected herbicide to invasive plants as needed.

-Inspect for uniformity in cross-section and longitudinal slope, correct as needed.

-Inspect basin inlet (curb cuts, pipes, etc.) and outlet for signs of erosion or blockage, correct as needed.

-Plant alternative grass species in the event of unsuccessful establishment.

-Reseed bare areas; install appropriate erosion control measures when native soil is exposed, or erosion channels are forming.

-Mow and trim vegetation 1-2 times per year outside of the growing season (i.e., only mow in early spring or late fall). Mower height should be set between 8-12 inches. Mow only when basin is dry to avoid rutting.

#### BMP-B29 Dry Extended Detention Basin:

Location:	Saddle Ridge Subdivision
Responsible Party:	DAMA
O&M Activities:	<ul> <li>-Inspect and correct erosion problems, damage to vegetation, and sediment and debris accumulation (address when &gt;3 inches at any spot or covering vegetation).</li> <li>-Inspect vegetation on side slopes for erosion and formation of rills and gullies, correct as needed.</li> <li>-Inspect for pools of standing water; dewater and discharge to an approved location and restore to design grade.</li> <li>-Inspect for litter; remove prior to mowing.</li> <li>-Remove invasive plants as needed or carefully apply selected herbicide to invasive plants as needed.</li> <li>-Inspect for uniformity in cross-section and longitudinal slope, correct as needed.</li> <li>-Inspect basin inlet (curb cuts, pipes, etc.) and outlet for signs of erosion or blockage, correct as needed.</li> <li>-Plant alternative grass species in the event of unsuccessful establishment.</li> <li>-Reseed bare areas; install appropriate erosion control measures when native soil is exposed, or erosion channels are forming.</li> <li>-Mow and trim vegetation 1-2 times per year outside of the growing season (i.e., only mow in early spring or late fall). Mower height should be set between 8-12 inches. Mow only when basin is dry to avoid rutting.</li> </ul>
BMP-B30 Dry Extended Detention Basin:	
Location:	Saddle Ridge Subdivision
Responsible Party:	DAMA
O&M Activities:	-Inspect and correct erosion problems, damage to vegetation, and sediment and debris accumulation (address when >3 inches at any spet or covering vegetation)

when >3 inches at any spot or covering vegetation).
 Inspect vegetation on side slopes for erosion and formation of rills and gullies, correct as needed.
 Inspect for pools of standing water; dewater and discharge to an approved location and restore to design grade.
 Inspect for litter; remove prior to mowing.
 Remove invasive plants as needed or carefully apply selected herbicide to invasive plants as needed.
 Inspect for uniformity in cross-section and longitudinal slope, correct as needed.

-Inspect basin inlet (curb cuts, pipes, etc.) and outlet for signs of erosion or blockage, correct as needed.

-Plant alternative grass species in the event of unsuccessful establishment.

-Reseed bare areas; install appropriate erosion control measures when native soil is exposed, or erosion channels are forming.

-Mow and trim vegetation 1-2 times per year outside of the growing season (i.e., only mow in early spring or late fall). Mower height should be set between 8-12 inches. Mow only when basin is dry to avoid rutting.

#### BMP-B33 Dry Extended Detention Basin:

Location: Summit St.

**Responsible Party:** DAMA

O&M Activities: -Inspect and correct erosion problems, damage to vegetation, and sediment and debris accumulation (address when >3 inches at any spot or covering vegetation). -Inspect vegetation on side slopes for erosion and formation of rills and gullies, correct as needed.

-Inspect for pools of standing water; dewater and discharge to an approved location and restore to design grade.

-Inspect for litter; remove prior to mowing.

-Remove invasive plants as needed or carefully apply selected herbicide to invasive plants as needed.

-Inspect for uniformity in cross-section and longitudinal slope, correct as needed.

-Inspect basin inlet (curb cuts, pipes, etc.) and outlet for signs of erosion or blockage, correct as needed.

-Plant alternative grass species in the event of unsuccessful establishment.

-Reseed bare areas; install appropriate erosion control measures when native soil is exposed, or erosion channels are forming.

-Mow and trim vegetation 1-2 times per year outside of the growing season (i.e., only mow in early spring or late fall). Mower height should be set between 8-12 inches. Mow only when basin is dry to avoid rutting.

#### BMP-B34 Dry Extended Detention Basin:

Location:	Roosevelt St.
Responsible Party:	DAMA
O&M Activities:	<ul> <li>-Inspect and correct erosion problems, damage to vegetation, and sediment and debris accumulation (address when &gt;3 inches at any spot or covering vegetation).</li> <li>-Inspect vegetation on side slopes for erosion and formation of rills and gullies, correct as needed.</li> <li>-Inspect for pools of standing water; dewater and discharge to an approved location and restore to design grade.</li> <li>-Inspect for litter; remove prior to mowing.</li> <li>-Remove invasive plants as needed or carefully apply selected herbicide to invasive plants as needed.</li> <li>-Inspect for uniformity in cross-section and longitudinal slope, correct as needed.</li> <li>-Inspect basin inlet (curb cuts, pipes, etc.) and outlet for signs of erosion or blockage, correct as needed.</li> <li>-Plant alternative grass species in the event of unsuccessful establishment.</li> <li>-Reseed bare areas; install appropriate erosion control measures when native soil is exposed, or erosion channels are forming.</li> <li>-Mow and trim vegetation 1-2 times per year outside of the growing season (i.e., only mow in early spring or late fall). Mower height should be set between 8-12 inches. Mow only when basin is dry to avoid rutting.</li> </ul>
BMP-B35 Dry Extended [	Detention Basin:

Location:	Summit St.
Responsible Party:	DAMA
O&M Activities:	<ul> <li>-Inspect and correct erosion problems, damage to vegetation, and sediment and debris accumulation (address when &gt;3 inches at any spot or covering vegetation).</li> <li>-Inspect vegetation on side slopes for erosion and formation of rills and gullies, correct as needed.</li> <li>-Inspect for pools of standing water; dewater and discharge to an approved location and restore to design grade.</li> <li>-Inspect for litter; remove prior to mowing.</li> <li>-Remove invasive plants as needed or carefully apply selected herbicide to invasive plants as needed.</li> <li>-Inspect for uniformity in cross-section and longitudinal slope, correct as needed.</li> </ul>

-Inspect basin inlet (curb cuts, pipes, etc.) and outlet for signs of erosion or blockage, correct as needed.

-Plant alternative grass species in the event of unsuccessful establishment.

-Reseed bare areas; install appropriate erosion control measures when native soil is exposed, or erosion channels are forming.

-Mow and trim vegetation 1-2 times per year outside of the growing season (i.e., only mow in early spring or late fall). Mower height should be set between 8-12 inches. Mow only when basin is dry to avoid rutting.

#### BMP-B41 Dry Extended Detention Basin:

Location: Wedgewood Wy.

**Responsible Party:** DAMA

O&M Activities: -Inspect and correct erosion problems, damage to vegetation, and sediment and debris accumulation (address when >3 inches at any spot or covering vegetation).
 -Inspect vegetation on side slopes for erosion and formation of rills and gullies, correct as needed.

-Inspect for pools of standing water; dewater and discharge to an approved location and restore to design grade.

-Inspect for litter; remove prior to mowing.

-Remove invasive plants as needed or carefully apply selected herbicide to invasive plants as needed.

-Inspect for uniformity in cross-section and longitudinal slope, correct as needed.

-Inspect basin inlet (curb cuts, pipes, etc.) and outlet for signs of erosion or blockage, correct as needed.

-Plant alternative grass species in the event of unsuccessful establishment.

-Reseed bare areas; install appropriate erosion control measures when native soil is exposed, or erosion channels are forming.

-Mow and trim vegetation 1-2 times per year outside of the growing season (i.e., only mow in early spring or late fall). Mower height should be set between 8-12 inches. Mow only when basin is dry to avoid rutting.

#### BMP-B45 Dry Extended Detention Basin:

Location:	Masonic Dr.
Responsible Party:	DAMA
O&M Activities:	<ul> <li>-Inspect and correct erosion problems, damage to vegetation, and sediment and debris accumulation (address when &gt;3 inches at any spot or covering vegetation).</li> <li>-Inspect vegetation on side slopes for erosion and formation of rills and gullies, correct as needed.</li> <li>-Inspect for pools of standing water; dewater and discharge to an approved location and restore to design grade.</li> <li>-Inspect for litter; remove prior to mowing.</li> <li>-Remove invasive plants as needed or carefully apply selected herbicide to invasive plants as needed.</li> <li>-Inspect for uniformity in cross-section and longitudinal slope, correct as needed.</li> <li>-Inspect basin inlet (curb cuts, pipes, etc.) and outlet for signs of erosion or blockage, correct as needed.</li> <li>-Plant alternative grass species in the event of unsuccessful establishment.</li> <li>-Reseed bare areas; install appropriate erosion control measures when native soil is exposed, or erosion channels are forming.</li> <li>-Mow and trim vegetation 1-2 times per year outside of the growing season (i.e., only mow in early spring or late fall). Mower height should be set between 8-12 inches. Mow only when basin is dry to avoid rutting.</li> </ul>
BMP-B51 Dry Extended I	Detention Basin:
Location:	474 Yalick Rd.

**Responsible Party:** DAMA

**O&M Activities:**-Inspect and correct erosion problems, damage to<br/>vegetation, and sediment and debris accumulation (address<br/>when >3 inches at any spot or covering vegetation).<br/>-Inspect vegetation on side slopes for erosion and formation<br/>of rills and gullies, correct as needed.<br/>-Inspect for pools of standing water; dewater and discharge<br/>to an approved location and restore to design grade.<br/>-Inspect for litter; remove prior to mowing.<br/>-Remove invasive plants as needed or carefully apply<br/>selected herbicide to invasive plants as needed.<br/>-Inspect for uniformity in cross-section and longitudinal<br/>slope, correct as needed.

slope, correct as needed.

age to ulation (address etation). n and formation and discharge n grade. ully apply selected herbicide to invasive plants as needed. -Inspect for uniformity in cross-section and longitudinal

-Inspect basin inlet (curb cuts, pipes, etc.) and outlet for signs of erosion or blockage, correct as needed.

-Plant alternative grass species in the event of unsuccessful establishment.

-Reseed bare areas; install appropriate erosion control measures when native soil is exposed, or erosion channels are forming.

-Mow and trim vegetation 1-2 times per year outside of the growing season (i.e., only mow in early spring or late fall). Mower height should be set between 8-12 inches. Mow only when basin is dry to avoid rutting.

#### BMP-B74 Dry Extended Detention Basin:

Location: Ivy Dr.

**Responsible Party:** DAMA

O&M Activities: -Inspect and correct erosion problems, damage to vegetation, and sediment and debris accumulation (address when >3 inches at any spot or covering vegetation).
 -Inspect vegetation on side slopes for erosion and formation of rills and gullies, correct as needed.

-Inspect for pools of standing water; dewater and discharge to an approved location and restore to design grade.

-Inspect for litter; remove prior to mowing.

-Remove invasive plants as needed or carefully apply selected herbicide to invasive plants as needed.

-Inspect for uniformity in cross-section and longitudinal slope, correct as needed.

-Inspect basin inlet (curb cuts, pipes, etc.) and outlet for signs of erosion or blockage, correct as needed.

-Plant alternative grass species in the event of unsuccessful establishment.

-Reseed bare areas; install appropriate erosion control measures when native soil is exposed, or erosion channels are forming.

-Mow and trim vegetation 1-2 times per year outside of the growing season (i.e., only mow in early spring or late fall). Mower height should be set between 8-12 inches. Mow only when basin is dry to avoid rutting.

#### BMP-B79 Dry Extended Detention Basin:

Location:	Lantern Hill	
Responsible Party:	DAMA	
O&M Activities:	Lantern Hill DAMA -Inspect and correct erosion problems, damage to vegetation, and sediment and debris accumulation (addre when >3 inches at any spot or covering vegetation). -Inspect vegetation on side slopes for erosion and formation of rills and gullies, correct as needed. -Inspect for pools of standing water; dewater and discharge to an approved location and restore to design grade. -Inspect for litter; remove prior to mowing. -Remove invasive plants as needed or carefully apply selected herbicide to invasive plants as needed. -Inspect for uniformity in cross-section and longitudinal slope, correct as needed. -Inspect basin inlet (curb cuts, pipes, etc.) and outlet for signs of erosion or blockage, correct as needed. -Plant alternative grass species in the event of unsuccess establishment. -Reseed bare areas; install appropriate erosion control measures when native soil is exposed, or erosion channed are forming. -Mow and trim vegetation 1-2 times per year outside of th growing season (i.e., only mow in early spring or late fall) Mower height should be set between 8-12 inches. Mow o when basin is dry to avoid rutting. Detention Basin:	
BMP-B80 Dry Extended E	Detention Basin:	
Location:	Lantern Hill	
Responsible Party:	DAMA	

**O&M Activities:** -Inspect and correct erosion problems, damage to vegetation, and sediment and debris accumulation (address when >3 inches at any spot or covering vegetation).

 -Inspect vegetation on side slopes for erosion and formation of rills and gullies, correct as needed.

 -Inspect for pools of standing water; dewater and discharge to an approved location and restore to design grade.

 -Inspect for litter; remove prior to mowing.

 -Remove invasive plants as needed.

 -Inspect for uniformity in cross-section and longitudinal slope, correct as needed.

-Inspect basin inlet (curb cuts, pipes, etc.) and outlet for signs of erosion or blockage, correct as needed.

-Plant alternative grass species in the event of unsuccessful establishment.

-Reseed bare areas; install appropriate erosion control measures when native soil is exposed, or erosion channels are forming.

-Mow and trim vegetation 1-2 times per year outside of the growing season (i.e., only mow in early spring or late fall). Mower height should be set between 8-12 inches. Mow only when basin is dry to avoid rutting.

#### BMP-SR10 Stream Restoration:

Location:	UNT to Toby Creek; Tunkhannock Hwy. and Irem Rd.
Responsible Party:	DAMA
O&M Activities:	<ul> <li>-Maintenance is necessary every quarter to ensure proper functionality of the stream.</li> <li>-Any structure that is expected to receive and/or trap debris and sediment shall be thoroughly inspected for excessive debris and clogging. Inspections shall be conducted at a minimum four (4) times per year or immediately following any storm creating greater than one (1) inch of water.</li> <li>-During the regular inspections the ford stream crossing should be thoroughly inspected for erosion. Erosion should be repaired immediately with native stream bed material or in some cases riprap to ensure proper flow rate.</li> <li>-Vehicles shall not be parked or driven on the streambed and care shall be taken to avoid excessive compaction by mower if applicable.</li> <li>-Sediment removed from the site shall be disposed of properly, and any areas that were disturbed shall be stabilized and revegetated immediately.</li> <li>-Care shall be taken to prevent compaction of in situ soils to promote healthy vegetation growth and to encourage infiltration.</li> <li>-Inspect the stream and floodplain after runoff events and make sure the stream returns to average water levels within 72 hours.</li> <li>-Also inspect for damage to erosion control measures, signs of water contamination/spills, and slope stability.</li> <li>-Upkeep of vegetation including mowing and/or trimming shall be performed as necessary to sustain the system. All detritus shall be removed from the basin.</li> </ul>

	<ul> <li>Fertilizers and pesticides shall not be used in maintaining the vegetation.</li> <li>All vegetated areas shall be inspected every year for any erosion.</li> <li>All vegetated areas shall be inspected every year for unwanted growth of exotic and/or invasive species.</li> <li>Vegetative cover shall be maintained at a minimum of ninety-five (95) percent. Vegetation shall be reestablished if vegetative cover has been reduced by ten (10) percent.</li> <li>If during inspection there are invasive species present, methods to control or reduce them include the following:</li> <li>Mowing should occur twice each growing season, mowing height should be set between eight and twelve inches.</li> </ul>
	<ul> <li>Remove the plants immediately and replace with native plants as needed</li> </ul>
	-An inspection checklist shall be included in the
	maintenance and shall be completed at a minimum once every year.
	-Regular inspection of the stream shall occur to assure
	proper implementation of BMP's. Operation and maintenance plans shall be inspected by a qualified person
	which may include the landowner or owner's designee (including the municipality for dedicated and owned
BMP-SR12 Stream Res	toration:
Location:	Toby Creek; Meadow Complex
Responsible Party:	DAMA
O&M Activities:	<ul> <li>-Maintenance is necessary every quarter to ensure proper functionality of the stream.</li> <li>-Any structure that is expected to receive and/or trap debris and sediment shall be thoroughly inspected for excessive debris and clogging. Inspections shall be conducted at a minimum four (4) times per year or immediately following any storm creating greater than one (1) inch of water.</li> </ul>

-During the regular inspections the ford stream crossing should be thoroughly inspected for erosion. Erosion should be repaired immediately with native stream bed material or in some cases riprap to ensure proper flow rate.

-Vehicles shall not be parked or driven on the streambed and care shall be taken to avoid excessive compaction by mower if applicable. -Sediment removed from the site shall be disposed of properly, and any areas that were disturbed shall be stabilized and revegetated immediately.

-Care shall be taken to prevent compaction of in situ soils to promote healthy vegetation growth and to encourage infiltration.

-Inspect the stream and floodplain after runoff events and make sure the stream returns to average water levels within 72 hours.

-Also inspect for damage to erosion control measures, signs of water contamination/spills, and slope stability.

-Upkeep of vegetation including mowing and/or trimming shall be performed as necessary to sustain the system. All detritus shall be removed from the basin.

•Fertilizers and pesticides shall not be used in maintaining the vegetation.

•All vegetated areas shall be inspected every year for any erosion.

•All vegetated areas shall be inspected every year for unwanted growth of exotic and/or invasive species.

•Vegetative cover shall be maintained at a minimum of ninety-five (95) percent. Vegetation shall be reestablished if vegetative cover has been reduced by ten (10) percent.

-If during inspection there are invasive species present, methods to control or reduce them include the following:

•Mowing should occur twice each growing season, mowing height should be set between eight and twelve inches.

•Remove the plants immediately and replace with native plants as needed.

-An inspection checklist shall be included in the maintenance and shall be completed at a minimum once every year.

-Regular inspection of the stream shall occur to assure proper implementation of BMP's. Operation and maintenance plans shall be inspected by a qualified person, which may include the landowner or owner's designee (including the municipality for dedicated and owned facilities).

#### BMP-SR19 Stream Restoration:

Location:	Toby Creek; Memorial Hwy.
<b>Responsible Party:</b>	DAMA

## ATTACHMENT F: DAMA PRP Project Overview

BMP ID	ВМР Туре	2018 PRP TSS Reduction (lbs/yr)	Project Notes
B7	Dry Extended Detention Basin	3,759.72	
B8	Dry Extended Detention Basin	6,206.61	BMP would provide less credits than previously estimated due to parsing
B13	Dry Extended Detention Basin	3,046.30	
B38	Dry Extended Detention Basin	288.82	Not cost effective for credit provided- moved to Alternative Project list
B63	Dry Extended Detention Basin	808.46	Not cost effective for credit provided- moved to Alternative Project list
B75	Dry Extended Detention Basin	8,757.54	Easement acquisition and utility positioning issues - moved to Alternative Project list
B79	Dry Extended Detention Basin	6,066.03	
B80	Dry Extended Detention Basin	7,572.33	
P1	Dry Extended Detention Basin	12,453.12	
P2	Dry Extended Detention Basin	3,760.33	
P3	Dry Extended Detention Basin	1,628.37	Potential development occuring at location - moved to Alternative Project list
P4	Dry Extended Detention Basin	12,566.03	
P5	Vegetated Open Channel	13,228.31	DEP not accepting of alternative methods proposed - moved to Alternative Project list
P6	Vegetated Open Channel	19,743.81	Determined Water of the Commonwealth by DEP therefore cannot complete BMP project here
P7	Dry Extended Detention Basin	222.81	Not cost effective for credit provided- moved to Alternative Project list
P8	Vegetated Open Channel	881.21	Not cost effective for credit provided- moved to Alternative Project list
P9	Foreset Buffer	251.91	Same location as BMP-SR9
P11	Forest Buffer	899.66	Golf course - cannot install buffer in fairway
P13	Dry Extended Detention Basin	18,224.19	Owner request to stop work immediately
P14	Dry Extended Detention Basin	8,003.99	Permitting issues due to wetlands at outfall
P15	Forest Buffer	2,535.82	Same location as BMP-SR15
P18	Permeable Pavement	510.70	Not cost effective for credit provided- moved to Alternative Project list
P19	Dry Extended Detention Basin	526.94	Not cost effective for credit provided- moved to Alternative Project list
P20	Dry Extended Detention Basin	337.58	Not cost effective for credit provided- moved to Alternative Project list
P21	Dry Extended Detention Basin	2,760.02	
P22	Vegetated Open Channel	17,461.90	Cannot install proposed BMP at this location due to open channels throughout neighborhood
P23	Vegetated Open Channel	4,975.02	Land acquisition issues - moved to Alternative Project list
P24	Vegetated Open Channel	12,977.02	Cannot install proposed BMP at this location due to open channels throughout neighborhood
SB9	Stream Restoration	15,708.00	Established floodplain, buffer, and streambanks look healthy; no reason to perform stream restoration
SB10	Stream Restoration	17,952.00	
SB11	Stream Restoration	14,810.40	Buffer would be nearly impossible without significant changes to golf course
SB12	Stream Restoration	17,952.00	
SB15	Stream Restoration	62,832.00	Significantly close to neighboring homes with no room for a buffer. Owners and access will also be an issue.
SB16	Stream Restoration	17,503.00	Wetland/lowland drainage area rather than a stream; restoration would certainly disturb healthy, existing wetlands while modifying what appears to be only an intermittent stream.
SB17	Stream Restoration	67,320.00	Eligible length of stream is much lower than originally expected (600LF) since the upstream section is limited by difficult access and an extremely established buffer. Downstream section is limited by residential areas and pre-existing infrastructure. Moved to Alternative Project list since 600LF could still be valid.

Project is Included in 2024 PRP Selected Project List Project is Not Included in 2024 PRP Selected Project List

## ATTACHMENT G: Selected BMP Pollutant Loading Reduction

#### Selected BMP Pollutant Loading Reductions - BMP Descriptions

#### BMP-P1: Dry Extended Detention Basin

The analysis evaluated the construction of a new dry extended detention basin located at Dallas Borough Park. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-P2: Dry Extended Detention Basin

The analysis evaluated the construction of a new dry extended detention basin located at Lackawanna Ave. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-P4: Dry Extended Detention Basin

The analysis evaluated the construction of a new dry extended detention basin located at Dallas Township Park. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-P21: Dry Extended Detention Basin

The analysis evaluated the construction of a new dry extended detention basin located at the Dallas School District/Back Mountain Little League property. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-P26: Dry Extended Detention Basin

The analysis evaluated the construction of a new dry extended detention basin located off Hemlock St. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### **BMP-P28: Filtering Practice**

The analysis evaluated dry gully restoration to incorporate a sand filter located off Glenview Ave. Construction activities include properly grading and installation of a stable filter channel to dissipate energy that extends from the upland source to the stream channel. The new channel is designed and constructed to achieve an equilibrium or near-equilibrium state where future sediment loss is minimized or eliminated together.

#### BMP-P29: Filtering Practice

The analysis evaluated dry gully restoration to incorporate a sand filter located off Poplar Ave. Construction activities include properly grading and installation of a stable filter channel to dissipate energy that extends from the upland source to the stream channel. The new channel is designed and constructed to achieve an equilibrium or near-equilibrium state where future sediment loss is minimized or eliminated together.

#### **BMP-P32: Filtering Practice**

The analysis evaluated dry gully restoration to incorporate a sand filter located off Midland Dr. Construction activities include properly grading and installation of a stable filter channel to dissipate energy that extends from the upland source to the stream channel. The new channel is designed and constructed to achieve an equilibrium or near-equilibrium state where future sediment loss is minimized or eliminated together.

#### **BMP-P35: Filtering Practice**

The analysis evaluated dry gully restoration to incorporate a sand filter located at 2211 Memorial Hwy. Construction activities include properly grading and installation of a stable filter channel to dissipate energy that extends from the upland source to the stream channel. The new channel is designed and constructed to achieve an equilibrium or near-equilibrium state where future sediment loss is minimized or eliminated together.

#### **BMP-P37: Filtering Practice**

The analysis evaluated dry gully restoration to incorporate a sand filter located off Overbrook Ave. Construction activities include properly grading and installation of a stable filter channel to dissipate energy that extends from the upland source to the stream channel. The new channel is designed and constructed to achieve an equilibrium or near-equilibrium state where future sediment loss is minimized or eliminated together.

#### BMP-B1: Dry Extended Detention Basin

The analysis evaluated a basin retrofit at a pre-existing basin located at Ridgeway Dr. at Irem Golf Course. The basin will be retrofitted from a detention basin to a dry extended detention basin. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-B7: Dry Extended Detention Basin

The analysis evaluated a basin retrofit at a pre-existing basin located at the Misericordia University Tennis Courts. The basin will be retrofitted from a detention basin to a dry extended detention basin. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-B13: Dry Extended Detention Basin

The analysis evaluated a basin retrofit at a pre-existing basin located at 2525 Memorial Hwy. The basin will be retrofitted from a detention basin to a dry extended detention basin. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-B16: Dry Extended Detention Basin

The analysis evaluated a basin retrofit at a pre-existing basin located at 474 Yalick Rd. The basin will be retrofitted from a detention basin to a dry extended detention basin. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-B29: Dry Extended Detention Basin

The analysis evaluated a basin retrofit at a pre-existing basin located within the Saddle Ridge Subdivision. The basin will be retrofitted from a detention basin to a dry extended detention basin. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-B30: Dry Extended Detention Basin

The analysis evaluated a basin retrofit at a pre-existing basin located within the Saddle Ridge Subdivision. The basin will be retrofitted from a detention basin to a dry extended detention basin. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-B33: Dry Extended Detention Basin

The analysis evaluated a basin retrofit at a pre-existing basin located off Summit St. The basin will be retrofitted from a detention basin to a dry extended detention basin. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-B34: Dry Extended Detention Basin

The analysis evaluated a basin retrofit at a pre-existing basin located off Roosevelt St. The basin will be retrofitted from a detention basin to a dry extended detention basin. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-B35: Dry Extended Detention Basin

The analysis evaluated a basin retrofit at a pre-existing basin located off Summit St. The basin will be retrofitted from a detention basin to a dry extended detention basin. Construction activities include lowering and leveling the basin bottom, increasing the

berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-B41: Dry Extended Detention Basin

The analysis evaluated a basin retrofit at a pre-existing basin located off Wedgewood Wy. The basin will be retrofitted from a detention basin to a dry extended detention basin. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-B45: Dry Extended Detention Basin

The analysis evaluated a basin retrofit at a pre-existing basin located off Masonic Dr. The basin will be retrofitted from a detention basin to a dry extended detention basin. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-B50: Dry Extended Detention Basin

The analysis evaluated a basin retrofit at a pre-existing basin located within the Village at Greenbriar. The basin will be retrofitted from a detention basin to a dry extended detention basin. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-B51: Dry Extended Detention Basin

The analysis evaluated a basin retrofit at a pre-existing basin located at 474 Yalick Rd. The basin will be retrofitted from a detention basin to a dry extended detention basin. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-B61: Dry Extended Detention Basin

The analysis evaluated a basin retrofit at a pre-existing basin located off Hill St. The basin will be retrofitted from a detention basin to a dry extended detention basin. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-B71: Dry Extended Detention Basin

The analysis evaluated a basin retrofit at a pre-existing basin located off Wakefield Rd. The basin will be retrofitted from a detention basin to a dry extended detention basin. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-B72: Dry Extended Detention Basin

The analysis evaluated a basin retrofit at a pre-existing basin located off Alfred Rd. The basin will be retrofitted from a detention basin to a dry extended detention basin. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-B74: Dry Extended Detention Basin

The analysis evaluated a basin retrofit at a pre-existing basin located off Ivy Dr. The basin will be retrofitted from a detention basin to a dry extended detention basin. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-B79: Dry Extended Detention Basin

The analysis evaluated a basin retrofit at a pre-existing basin located off Lantern Hill. The basin will be retrofitted from a detention basin to a dry extended detention basin. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-B80: Dry Extended Detention Basin

The analysis evaluated a basin retrofit at a pre-existing basin located off Lantern Hill. The basin will be retrofitted from a detention basin to a dry extended detention basin. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### **BMP-SR10: Stream Restoration**

The analysis evaluated a stream restoration project and buffer along an unnamed tributary to Toby Creek located between Tunkhannock Hwy. and Irem Rd. Construction activities include 400 linear feet of streambank restoration, vegetative stabilization, and the establishment of 35 feet of riparian buffer on each side of the stream.

#### **BMP-SR12: Stream Restoration**

The analysis evaluated a stream restoration project and buffer along Toby Creek located within the Meadow Complex. Construction activities include 400 linear feet of streambank restoration, vegetative stabilization, and the establishment of 35 feet of riparian buffer on each side of the stream.

#### **BMP-SR19: Stream Restoration**

The analysis evaluated a stream restoration project and buffer along Toby Creek located at 2211 Memorial Hwy. Construction activities include 1,150 linear feet of streambank restoration, vegetative stabilization, and the establishment of 35 feet of riparian buffer on each side of the stream.

#### BMP-SR20: Stream Restoration

The analysis evaluated a stream restoration project and buffer along Trout Brook located at 1170 Lower Demunds Rd. Construction activities include 600 linear feet of streambank restoration, vegetative stabilization, and the establishment of 35 feet of riparian buffer on each side of the stream.

#### Selected BMP Reduction by Watershed

## ATTACHMENT H: Alternative BMP Pollutant Loading Reduction

#### Alternative BMP Pollutant Loading Reduction - BMP Description

#### BMP-P3: Dry Extended Detention Basin

The analysis evaluated the construction of a new dry extended detention basin located at Dallas Township Park. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-P5: Dry Extended Detention Basin

The analysis evaluated the construction of a new dry extended detention basin located at 2465 PA-309. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-P7: Dry Extended Detention Basin

The analysis evaluated the construction of a new dry extended detention basin located at Dallas Borough Park. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-P8: Vegetated Open Channel

The analysis evaluated the construction of a vegetated open channel located along Old Carvertown Rd. Construction activities include grading, constructing check dams, if required, and seeding and lining the channel as per approved plans and final planting list.

#### **BMP-P18: Permeable Pavement**

The analysis evaluated the installation of permeable pavement at the Kingston Township building parking lot. Construction activities include installation of a permeable surface course underlain by a uniformly graded stone bed which provides temporary storage for peak rate control and promotes infiltration.

#### BMP-P19: Dry Extended Detention Basin

The analysis evaluated the construction of a new dry extended detention basin located at the Dallas Township building. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-P20: Dry Extended Detention Basin

The analysis evaluated the construction of a new dry extended detention basin located at the Dallas School District/Back Mountain Little League property. Construction activities include lowering and leveling the basin bottom, increasing the berm height,

modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-P23: Dry Extended Detention Basin

The analysis evaluated the construction of a new dry extended detention basin located off Huyler Ave. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-P25: Dry Extended Detention Basin

The analysis evaluated the construction of a new dry extended detention basin located off Pine View Ave. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### **BMP-P27: Filtering Practice**

The analysis evaluated dry gully restoration to incorporate a sand filter located off of Poplar Ave. Construction activities include properly grading and installation of a stable filter channel to dissipate energy that extends from the upland source to the stream channel. The new channel is designed and constructed to achieve an equilibrium or near-equilibrium state where future sediment loss is minimized or eliminated together.

#### BMP-P31: Vegetated Open Channel (C/D Soils)

The analysis evaluated the construction of a vegetated open channel or better located off Old Upper Demunds Rd. Construction activities include grading, constructing check dams, if required, and seeding and lining the channel as per approved plans and final planting list.

#### BMP-P33: Filtering Practice

The analysis evaluated dry gully restoration to incorporate a sand filter located at the corner of Susquehanna Ave. and Luzerne Ave. Construction activities include properly grading and installation of a stable filter channel to dissipate energy that extends from the upland source to the stream channel. The new channel is designed and constructed to achieve an equilibrium or near-equilibrium state where future sediment loss is minimized or eliminated together.

#### BMP-P34: Filtering Practice

The analysis evaluated dry gully restoration to incorporate a sand filter located between Rt. 309 and N. Main St. Construction activities include properly grading and installation of a stable filter channel to dissipate energy that extends from the upland source to the stream channel. The new channel is designed and constructed to achieve an equilibrium or near-equilibrium state where future sediment loss is minimized or eliminated together.

#### BMP-P36: Bioswale or Filtering Practice

The analysis evaluated the construction of a new bioswale or filtering practice located at off W. Belmont Ave. Construction activities include re-grading, installing amended soils, bioswale plantings or filtering media, and stabilization of existing storm outlets.

#### BMP-P38: Vegetated Open Channel (C/D Soils)

The analysis evaluated the construction of a vegetated open channel or better located at the corner of Maple St. and Terrace St. Construction activities include grading, constructing check dams, if required, and seeding and lining the channel as per approved plans and final planting list.

#### BMP-B10: Dry Extended Detention Basin

The analysis evaluated the construction of a basin retrofit at a pre-existing basin located at 3235 Memorial Hwy. The basin will be retrofitted from a detention basin to a dry extended detention basin. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-B38: Dry Extended Detention Basin

The analysis evaluated the construction of a basin retrofit at a pre-existing basin located at the Country Club Shopping Center. The basin will be retrofitted from a detention basin to a dry extended detention basin. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-B63: Dry Extended Detention Basin

The analysis evaluated the construction of a basin retrofit at a pre-existing basin located at the Kingston Township building. The basin will be retrofitted from a detention basin to a dry extended detention basin. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-B75: Dry Extended Detention Basin

The analysis evaluated a basin retrofit at a pre-existing basin located at 370 Carverton Rd. The basin will be retrofitted from a detention basin to a dry extended detention basin. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-B76: Dry Extended Detention Basin

The analysis evaluated a basin retrofit at a pre-existing basin located at 2 Manor Dr. The basin will be retrofitted from a detention basin to a dry extended detention basin. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### BMP-B78: Dry Extended Detention Basin

The analysis evaluated a basin retrofit at a pre-existing basin located between N. Lehigh St. and Railroad St. The basin will be retrofitted from a detention basin to a dry extended detention basin. Construction activities include lowering and leveling the basin bottom, increasing the berm height, modifying basin grading, upgrading the outlet structure and pipe, and increasing the spillway invert.

#### **BMP-SR9: Stream Restoration**

The analysis evaluated a stream restoration project and buffer along an unnamed tributary to Toby Creek located from Hildebrandt Rd. to PA309 on private property. Construction activities include 350 linear feet of streambank restoration, vegetative stabilization, and the establishment of 35 feet of riparian buffer on each side of the stream.

#### **BMP-SR11: Stream Restoration**

The analysis evaluated a stream restoration project and buffer along an unnamed tributary to Toby Creek located on private golf course property off Irem Rd. Construction activities include 330 linear feet of streambank restoration, vegetative stabilization, and the establishment of 35 feet of riparian buffer on each side of the stream.

#### **BMP-SR15: Stream Restoration**

The analysis evaluated a stream restoration project and buffer along an unnamed tributary to Toby Creek located on private property off Harris Hill Rd. Construction activities include 1,400 linear feet of streambank restoration, vegetative stabilization, and the establishment of 35 feet of riparian buffer on each side of the stream.

#### BMP-SR16: Stream Restoration

The analysis evaluated a stream restoration project and buffer along an unnamed tributary to Toby Creek located between Carverton Rd. and Terrace Ave. on private property. Construction activities include: 390 linear feet of streambank restoration, vegetative stabilization, and the establishment of 35 feet of riparian buffer on each side of the stream.

#### **BMP-SR17: Stream Restoration**

The analysis evaluated a stream restoration project and buffer along an unnamed tributary to Toby Creek located within the Dallas Nature Playground on Dallas Township property. Construction activities include 1,500 linear feet of streambank restoration, vegetative stabilization, and the establishment of 35 feet of riparian buffer on each side of the stream.

#### ATTACHMENT I: DAMA Intergovernmental Cooperation Agreement

INTERGOVERNMENTAL COOPERATION AGREEMENT FOR THE PREPARATION, CREATION, AND IMPLEMENTATION OF THE REGIONAL CHESAPEAKE BAY POLLUTANT REDUCTION PLAN ("MS4") IN CERTAIN MUNICIPALITIES SITUATED IN LUZERNE COUNTY, PENNSYLVANIA

#### **AUTHORIZATION**

THIS AGREEMENT is authorized by the *Pennsylvania Intergovernmental Cooperation Act*, and it is entered into pursuant to applicable Pennsylvania law, including, but not limited to the *Pennsylvania Intergovernmental Cooperation Act*, Act 1996-17, P.L. 1158, *53 Pa. C.S.A. ¶2301*, et seq.

#### RECITALS

**WHEREAS,** Municipalities discharging stormwater within the Chesapeake Bay watershed are required to prepare and implement a Chesapeake Bay Pollutant Reduction Plan ("CBPRP"), a draft of which is attached hereto, incorporated as an addendum and made a part hereof, and marked as Schedule "A"; and

**WHEREAS**, DAMA is assisting the Municipalities in their compliance with the process of preparing a watershed-based pollutant reduction plan; and

**WHEREAS**, as an alternative to the costs to be borne individually by each of the Municipalities in the preparation and development of their own stormwater management plans, the Municipalities have elected to adopt the stormwater plan prepared by DAMA, which is consistent with the "CBPRP" (Schedule "A"); a draft of which is attached hereto, incorporated herein and marked Schedule "B" and made a part hereof to control stormwater and improve water quality, as required as a mandatory part of the regional pollutant reduction plan; and

**WHEREAS**, the stormwater management plan prepared by DAMA (Schedule "B") is considered by the Municipalities to provide adequately for certain of the Municipalities' MS4 responsibilities. Accordingly, the aforesaid "CBPRP" (Schedule "A") and the DAMA Stormwater Management Plan (Schedule "B"), together with this Intergovernmental Cooperation Agreement, and any amendments thereof are hereby to be adopted and enacted by an Ordinance of this Municipality as a portion of a regional watershed-based pollutant reduction plan, stormwater discharge plan, and water quality improvement plan of all of the affected Municipalities; all in accordance with the Chesapeake Bay Pollution Reduction Plan ("CBPRP"); and

**WHEREAS**, the purpose of this Agreement is to set forth herein the accord of the several participating Municipalities to cooperate with DAMA, as its delegate, to comply with, prepare, plan, and implement certain of the rules and regulations of the Chesapeake Bay Pollutant Reduction Plan ("CBPRP"); all within the scope of the DAMA stormwater management plan, as presently constituted on this date and as may be amended hereafter; and

**WHEREAS**, the parties hereto agree and acknowledge that nothing in this Agreement, nor the resultant actions from it, shall prohibit, prevent, or interfere with any ability or obligation to comply with applicable Pennsylvania law and regulation, Federal law and regulation, applicable regulatory agency rules and policies, permit requirements, DEP directives, or United States Environmental Protection Agency directives, and local ordinances; and

**NOW, THEREFORE,** the parties hereto, in consideration of the mutual promises, covenants, and undertakings herein stated, each binding itself and representing that it has proper legal authority to enter into this Agreement, and each undertaking to be legally bound hereby, agree as follows.

#### (1) <u>RECITALS:</u>

All of the Recitals hereto are incorporated by reference as if fully set forth at length herein.

#### (2) <u>ORGANIZATION</u>:

The Municipalities agree that DAMA shall be responsible for coordinating the planning, implementation and development of the "CBPRP" (Schedule "A") and the DAMA stormwater management Plan (Schedule "B") in their separate municipal jurisdictions, limited only by the terms and provisions stated in such Plans and any amendment thereof.

#### (3) <u>MUNICIPALITY FUNCTIONS, POWERS, AND RESPONSIBILITY:</u>

The Municipalities' functions, powers and responsibilities shall include, but not limited to:

- (a) The Municipalities agree to take any and all legislative or other acts necessary to implement the purposes of this Agreement.
- (b) The Municipalities shall timely submit MS4 Annual Status Reports as required by existing law and regulations. Each Municipality shall, contemporaneously upon submission to DEP, provide DAMA with a digital or hard copy of the Municipality's MS4 Annual Status Report.
- (c) The Municipalities agree to provide to DAMA for its review any land development plans and applications for stormwater permits received by the Municipality and required by the *Pennsylvania Municipalities Planning Code*, 53 P.S. §10101, et seq., that may impact in any water courses within its geographical jurisdiction, particularly, any stormwater and/or pollutant discharges.
- (d) The Municipalities shall cooperate in any application by DAMA for grants or other funding that can be used to fund the regional stormwater discharges and pollutant reduction plan's implementation and/or the actions and activities undertaken pursuant to this Agreement.

#### (4) <u>ENFORCEMENT ACTIONS</u>:

If any compliance or enforcement action (including the pursuit of a civil penalty, issuance of an Notice of Violation ("NOV"), Order, or any other compliance notice or action) is initiated by either the Commonwealth of Pennsylvania or the Federal Government in any way related to the implementation actions and activities undertaken pursuant to this Agreement and the relevant Municipality MS4 requirements, DAMA shall, in its sole discretion, discuss the enforcement action, whether any one or more

Municipalities are responsible for the alleged violation(s), and determine what DAMA's response action(s) shall be. Where an act of malfeasance, misfeasance, negligence, or other misconduct of a Municipality results in the Municipality or DAMA incurring a civil penalty, issuance of an NOV or other compliance action, a fine, or a damages award of any kind, or other breach of the terms of this Agreement the responsible Municipality, as determined by DAMA, shall indemnify and hold harmless DAMA with respect thereto. Should DAMA become aware of a potential compliance issue or question, it shall send written notice to all relevant Municipalities within three (3) business days, which notice shall include any and all correspondence (including hard, electronic, or telephone call notes/summary) from or with a regulatory entity (including, but not limited to, a County Conservation District, DEP, the United States Environmental Protection Agency, Federal Emergency Management Agency, Pennsylvania Emergency Management Agency, and U.S. Army Corps of Engineers). DAMA shall convene a special meeting in accordance with applicable law, and within ten (10) calendar days of issuance of the notice referenced herein, in an effort to resolve the dispute. In the event that DAMA and a Municipality are unable to resolve the dispute, DAMA may unilaterally terminate the Agreement as to any such Municipality.

#### (5) <u>RATES</u>:

For the purposes of funding and covering the costs of all preparation, planning, remedial inspections work undertaken by DAMA pursuant to this Agreement, DAMA shall charge reasonable and uniform rates to all ratepayers within each Municipality's borders. DAMA agrees to develop and implement reasonable and uniform rates and rules and regulations in accordance with the Municipality Authorities Act, 53 Pa. C.S. §5601, et seq. with respect to the planning and administration of all work done by DAMA hereunder. Notice to the Municipalities of such rates shall be first given before assessed.

#### (6) EFFECTIVE DATE AND TERM:

(i) The effective date of this Agreement shall be

(ii) The term of this Agreement shall be perpetual, beginning on the effective date hereof, unless earlier terminated by the written consent of all parties hereto and following the payment and discharge of all debts incurred by DAMA related to any work or services performed by it in accordance with this Agreement.

#### (7) <u>APPLICABLE LAW</u>:

The parties agree and affirm that Pennsylvania law applies to this Intergovernmental Cooperation Agreement and all matters covered by and addressed by this Agreement. It is acknowledged and agreed that the sole and exclusive jurisdiction and venue for any dispute relating to any matter covered by this Agreement and/or regarding any dispute over the enforcement or interpretation of this Agreement shall rest with the Luzerne County Court of Common Pleas. The parties hereby submit to the exclusive jurisdiction of that Court.

#### (8) **INTEGRATION**:

This Agreement contains the entire agreement between the parties, together with Schedule "A" and Schedule "B" affixed to the Agreement. There are no understandings or agreements, verbal or otherwise, in relation hereto, except those expressly and specifically set forth herein. The parties have not relied upon any statement, projection, disclosure, report, information or any other representation or warranty, except for those as may be specifically and expressly set forth in this Agreement.

#### (9) <u>NO ORAL MODIFICATION</u>:

This Agreement may not be modified, except in a writing executed by all parties. This Agreement shall be amended only in such writing, by duly authorized representatives of all parties, and such revision(s) must be approved by official action of each Municipality and as required by any applicable law of the Commonwealth of Pennsylvania.

#### (10) FEES AND COSTS:

Unless otherwise expressly stated herein, the parties agree to bear their own fees and costs in connection with or incurred related to the matters between them and relating to this Agreement.

#### (11) <u>SIGNATURES</u>:

The parties hereto, and the undersigned individuals and/or representatives, represent and warrant that they have the authority to enter into this Agreement and be legally bound hereby. **IN WITNESS WHEREOF**, the parties hereto have caused this Intergovernmental Cooperation Agreement for the implementation of the ("CBPRP") and the DAMA stormwater management plan in compliance with the Chesapeake Bay Pollutant Reduction Plan to be executed and effective on the <u>Street</u> day of <u>Contect</u>, 2017.

#### SECOND ADDENDUM TO INTERGOVERNMENTAL COOPERATION AGREEMENT

THIS AGREEMENT dated as of the <u>J</u> day of <u>Ochran</u>, 2017 between DALLAS AREA MUNICIPAL AUTHORITY, a Pennsylvania municipality authority organized and existing under the *Pennsylvania Municipality Authorities Act* of 1945, as amended (hereinafter called "DAMA") and DALLAS TOWNSHIP, DALLAS BOROUGH and KINGSTON TOWNSHIP, each of which is a political subdivision of the Commonwealth of Pennsylvania (hereinafter called "Municipalities")

#### WITNESSETH:

1. DAMA was organized by the Borough of Dallas and the Township of Kingston and Dallas, Pennsylvania (hereinafter referred to as the "Municipalities") for the purpose of providing sewer and sewerage services to the Municipalities. Subsequently, the Articles of Incorporation of the Authority have been amended to include providing other services to the Municipalities; most recently storm water management consistent with Act 68 of 2013.

2. At the request of the Municipalities, DAMA has developed a Chesapeake Bay Pollution Reduction Plan (CBPRP) to meet prevailing mandates of the Pennsylvania Department of Environmental Protection (PADEP) regulations of Municipal Separate Storm Sewer Systems (MS4).

3. To meet the goals of the CBPRP and to meet present and future MS4 regulations, DAMA will be responsible for activities for the Municipalities to comply with Minimum Control Measures (MCM) #1 (Public Education), MCM #2 (Public Involvement) and MCM #3 (Illicit Discharges).

4. MCM #4 (Construction Water Runoff Control), MCM #5 (Post Construction Runoff Control), and MCM #6 (Municipal Operations, Pollution Prevention/Good Housekeeping) will remain the responsibility of the Municipalities.

5. Maintenance of the existing storm water infrastructure and Best Management Practices (BMP), with the exception of those modified by the Pollutant Reduction Plan (CBPRP), will remain the responsibility of the Municipalities (Pages 16, 17 and 18 of the PRP list specific maintenance requirements for the existing BMPs). These pages are included with this

#### SCHEDULE "B"

Agreement (Schedule "A"), and the responsible party for each BMP will develop a program to comply with the maintenance schedule.

6. The (CBPRP) developed for the Townships of Dallas and Kingston and the Borough of Dallas by T&M Associates lists the existing Best Management Practices (BMP). They consist of fifty nine (59) dry detention basins, twelve (12) extended dry detention basins, eight (8) wet ponds, three (3) underground dry detention and one (1) rain garden.

7. Dallas Area Municipal Authority (DAMA) will be responsible for the design and installation of the BMPs described in the CBPRP.

8. The CBPRP proposes to retrofit eight (8) dry detention basins to extended dry detention basins and install ten (10) new extended dry detention basins; thereby creating a total of extended dry detention basins to thirty (30) to be completed at the expense of DAMA.

9. The CBPRP also proposes to install vegetated open channels in five (5) neighborhoods, construct forest buffers in three (3) areas, and undertake stream bank restoration in seven (7) areas totaling four thousand seven hundred and seventy (4770) feet and install forest buffers in three (3) areas; all to be completed at the expense of DAMA.

10. Dry extended detention basins, forest buffers and vegetated open channels require considerable maintenance to remain affective. DAMA will be responsible for the maintenance of these BMPs (Pages 25 through 32 of the CBPRP) contain specific maintenance requirements for these, as well as other, BMPs. These pages are included with this agreement (Schedule "A"), and DAMA will develop a program to comply with the required maintenance schedule, with the exception of the previous parking lot(s), the maintenance of which will remain the responsibility of the municipalities. Stream bank restoration requires little maintenance, but DAMA will monitor these BMPs for damage after major weather events.

11. Actual BMP O&M activities will be recorded and documented by each municipality and DAMA for inclusion in the Annual MS4 Status Report.

12. The following summary is a statement of the responsibilities hereunder to be assumed by the respective parties. Such responsibilities can be revised and amended in the event of any modification or revision of DEP's rules and regulations at any future time or, in the event, the respective parties agree collectively to amend the Agreement.

MCM 1(all)	DAMA
MCM 2(all)	DAMA
MCM 3.1	DAMA/Municipality
MCM 3.2	DAMA
MCM 3.3	DAMA
MCM 3.4	DAMA
MCM 3.5	Municipality
MCM 3.6	DAMA
MCM 4(all)	Municipality
MCM 5.1	Municipality
MCM 5.2	Municipality
MCM 5.3	Municipality/DAMA
MCM 6.1	Municipality/DAMA
MCM 6.2	Municipality/DAMA
MCM 6.3	DAMA

13. This Addendum, marked Schedule "B" constitutes DAMA's stormwater management plan consistent with "CBPRP", and it is incorporated into and made as integral part of the Intergovernmental Cooperation Agreement between the parties to which it is affixed.
